

Step 55 : Compactified origins sequence

1. The printouts of hyper cubes along spatial dimensional order (2-space in the role of dimension) of creator space (4-space) as concentric polygons / circles deserve to be chased for the feature of compactified origins sequence as domain fold sequence
2. The feature that pentagon structures inner pentagon and the sequence is of ad-infinitum steps and the center / origin is attainable only as a limit value.
3. This limit value feature is common to whole range of polygons of sides five and more
4. Infact this common limit value is the feature of origin which makes the origin as a compactified seat of whole range of dimensional spaces as domain folds of manifestation layers / hyper cubes
5. The limit value origin is of the feature of a base of the origin fold of a manifestation layer.
6. It is attainable as a transcendence from origin fold as a domain with its origin being the limit value origin
7. This transcendence phenomenon for the origin fold as domain fold is of the feature of domain fold of hyper cube being stripped off whole range of its boundary components
8. It as such amounts to reaching at $(2n+1)$ th geometry of n space / $(2n + 1)$ th version of hyper cube n
9. Hyper cube stripped off its complete boundary is of the features of content lump of the dimensional space
10. It is the dimensional space itself playing the role of domain fold
11. One may have a pause here and being face to face with this phenomenon of n – space playing the role of a manifestation fold

12. In fact there are four folds of a manifestation layer, and the dimensional space can play any of these roles
13. Not only that the dimensional space also can play the role of the base (transcendental base of the manifestations).
14. It is this feature of the dimensional space which deserves to be chased and to be comprehended for their appreciation and imbibing
15. This in a way strips off the dimensional space of its dimensional values and makes it of transcendental features
16. It is this transcendental state of a space which of its own goes self referral
17. It is this self organizing power of a space which of its own inherits its states to sustain existence within and without bodies
18. This self referral transcendental feature of space marks its presence in the existence phenomenon as transcendental carriers and as a transcendental flow which melts inertia and leads to transition and transformation for Earth element into water element and water element into fire element and fire element into air element and air element into space element and space element into transcendental state of sun and beyond that of pole star.
19. One shall sit comfortably and permit the transcending mind to be face to face with these features manifesting as geometric formats for the existence phenomenon of Earth to Sun range
20. Further one shall sit comfortably and permit the transcending mind to continuously remain in prolonged sitting of trans to be face to face with these features manifesting as the organization format of Ganita Sutras permit deciphering as consciousness field at the core of intelligence field fountained by mind for to be followed by sensory domains lively within human frame
